

MASTER THESIS PROPOSALS.

INDEX

	Page
1. Modular Apparatus for nuclear Rections Spectrometry (MARS)	1
2. Artificial intelligence for the modeling of neutrino-nucleus interactions	2
3. Theoretical study of nuclear beta decays for recent experimental proposals	3
4. Heart brain link in metabolic imaging of a rat model of Takutsubo syndrome	3
5. Proton Range verification in prothotherapy from patient activation and deep learning	4
6. Deep Learning approaches to improve the time resolution of nuclear detectors employed in fast-timing experiments and ToF-PET	5
7. Hyperonic stars within alternative theories of gravity	6
8. Structure of single-A Hypernuclei	7
9. Study of Low Gain Avalanche Detectors using particle accelerators	8
10. Magnetic Diagnostic for the Small Aspect Ratio Tokamak of the University of Seville	9
11. Analysis of pedestal structure and confinement in mixed isotope plasmas at JET	10
12. Feasibility study of an imaging charge exchange recombination spectroscopy diagnostic	11
13. Experimental measurement and theoretical analysis of N+N elastic scattering at low energies	12
14. Development of a two color interferometer and polarimeter for density measurements at the Small Aspect Ratio Tokamak of the University of Seville	13
15. <i>Modelling and control of vertical displacement events in the SMART tokamak employing highly shaped equilibria</i>	14
16. Characterization of a strip silicon detection array for the measure of exotic nuclei reactions in the vicinity of the Coulomb barrier.	15
17. Construction of a tracking array for the future radioactive beams facility at INFN-LNS inside of the FraSe project.	16
18. Optimizing FLASH-proton radiation therapy	17
19. Study of b- and c-jets identification with quantum machine learning algorithms and application to the Hreconstruction at LHCb.	18
20. Sensitivity analysis of proton microdosimetry in water to changes on interaction models and scoring method	19
21. Study of the Hoyle state band in ^{12}C via inelastic excitations	20
22. Matter's Origin from RadioActivity: first experiments analysis	21
23. <i>Characterization of the simultaneous spin analyser built for the neutron electric dipole moment (nEDM) experiment.</i>	22
24. Fission Studies at VAMOS in Inverse Kinematics (FISVIK)	23
25. Contribution to the LISA data analysis applying true data taking condition for a realistic analysis.	25
26. <i>Participation of the new INDRA-FAZIA experimental campaign E818 at GANIL</i>	26
27. <i>Towards a better experimental characterization of the isovector part of the equation of state of nuclear matter</i>	27
28. Multi-neutron detection for the investigation of exotic nuclei	29
29. Development of an X-ray detection system for particle ID of superheavy nuclei	30

30. Fission studies with vamos++ and falstaff spectrometers	32
31. Microscopic reaction model for nucleon scattering on light nuclei	33
32. Unified theory of nuclear structure and reactions in the open quantum system framework	35
33. 3-dimensional scintillation dosimetry for small irradiation fields control in protontherapy	36
34. AI for cryogenics and RF of superconducting accelerators	37
35. SHELA (Super Heavy Element LAsER spectroscopy at GSI and GANIL)	38
36. Master Thesis Project " QARaML" : Machine-learning for radiotherapy quality assurance of clinical trials (cRTQA)	39
37. Gamma ray detection with CHIMERA 4 π array	40
38. Dynamical processes in projectile break-up and Intermediate Mass Fragments production at 20 A.MeV beam incident energy studied with the CHIMERA and FARCOS devices at LNS-CATANIA	40
39. Study of the $^{23}\text{Na}(p,\gamma)^{24}\text{Mg}$ reaction for astrophysical purposes	41
40. The $^{19}\text{F}(p,\alpha_{\pi})^{16}\text{O}$ direct measurement at energies of astrophysical relevance using the ELISSA+LHASA detection arrays	41
41. MSc Theses available at the interface between particle and nuclear astrophysics.	42
42. Modeling direct reactions between heavy ions	42
43. Description of fluid dynamics with transport theories	42
44. Theoretical description of dissipative Heavy Ion Collisions and impact on the modeling of neutron stars	42
45. Machine learning aided identification of rare resonances in pp and Pb-Pb collisions at the LHC energies with the ALICE detector	42
46. Characterization of the response of a liquid argon double-phase TPC within the ReD Project	42
47. MSc Thesis available in the framework of the SBN and DUNE collaborations.	43
48. MSc Thesis available in the framework of the KM3Net collaboration.	43
49. Pet radiomics studies (IBFM-CNR Cefalù)	44
50. Radioprotection studies at lns-infn using a monte carlo approach (LNS-INFN Catania)	45
51. Challenges and solutions for beam monitoring and dosimetry of ultra-high dose rates beams	45
52. Microdosimetry for clinical hadron beams.	46
53. Microwave/mm-wave interferopolarimetry for magneto-plasmas of ECR Ion Source	46
54. Photonics crystals for ultracompact dielectric accelerators	46
55. Microwave Inverse profilometry for magneto-plasmas of ECR ion source and/or fusion reactors devices	47
56. <i>Study of magneto-plasma opacity in laboratory</i>	47
57. Studying spatial distribution of ion properties in ECR plasmas with self- consistent numerical codes for the PANDORA Project	47
58. Space-resolved X-ray spectroscopy and imaging of ECR plasmas using quasi-optical methods	48
59. Improving gamma detection by isolating signal from background - a machine learning approach	48
60. Radioactive Disequilibria in Volcanic Plumes	49

61. Transport solutions for the INFN-LNS laser-driven acceleration facility	49
62. Dosimetric approaches and detector developments for "Flash radiotherapy"	49
63. ELIMED project- First dosimetric and radiobiological measured with laser-accelerated ion beams at ELI-beamlines (Prague, CZ)	50
64. Modelling parameters of interest in radiobiology (LET, RBE) using a Monte Carlo approach at both macro and micro-dosimetric scale.	50
65. Investigation of new irradiation and imaging approaches to enhance the radiobiological effectiveness of proton beams using nuclear reactions. Experimental and simulation activities	51
66. Detectors development for 2D dosimetry of conventional and laser-accelerated ion beam	51
67. New transport solution for eye-protontherapy beamlines	51
68. Investigation of the aneutronic proton-boron fusion reaction in plasma for energetic studies	52
69. Dosimetric characterization of an x-ray system for in-vivo irradiations	53
70. Simulation of neutron inspection techniques based on the laser plasma neutron beam and first experiments with a Cf source.	54
71. Study for a toolbox probes for UGV platform in D&D operations.	54
72. Detector and readout studies (experimental tests and simulation) for neutron and gamma detection.	55
73. Study of the communication system for a UAV system in the environmental radioactive monitoring	55
74. Low-energy heavy-ion fusion. Upgrade of the PISOLO setup with coincidences between evaporation residues and charged particles	56
75. MACS measurements with neutron activation method	57
76. Beta-delayed gamma-ray spectroscopy of ^{101}Cd	57
77. In-beam commissioning of the AGATA Tracking array with ancillary instrumentation.	58
78. Study of the $^{12}\text{C}(p,\gamma)^{13}\text{N}$ and $^{13}\text{C}(p,\gamma)^{14}\text{N}$ at astrophysical energies	58
79. Study of the $^{20}\text{Ne}(p,\gamma)^{21}\text{Na}$ reaction at astrophysical energies	58
80. Study of the Er = 65 keV resonances in the $^{17}\text{O}(p,\gamma)^{18}\text{F}$ reaction at the underground experiment LUNA	59
81. Commissioning of the gamma-ray tracking array	59
82. Study of compact high intensity linear accelerators.	60
83. Monte-Carlo based dosimetry using PET/CT imaging in radiopharmaceutical therapy in the context of the ISOLPHARM project.	60
84. <i>Precision measurement of the Fierz term in ^6He decay</i>	61
85. Study of forbidden transitions in weak interaction decays	62
86. Ion collision induced fragmentation of water clusters	64
87. Measurement of charm-baryon production in proton-proton, proton-Pb and Pb-Pb collisions at the LHC with ALICE	65
88. Preparation and participation to the first experiment on surrogate reactions at heavy-ion storage rings	66
89. Clinical feasibility study of an ionizing radiation detector device based in multiple miniature plastic scintillation sensors	67
